RESEARCH EXPERIENCE

- Led the national-level innovation training project "Ecological and Environmental Effects of Rivers under Co-exposure to Trace Pollutants," investigating the environmental impacts of trace pollutant co-exposure on river ecosystems.
- Served as a core member in the research project "Early Identification Methods for Loess Landslides Based on Optical Remote Sensing and Machine Learning," applying machine learning algorithms to process optical remote sensing data for early landslide warning in loess regions.
- Took the lead in the project "Tri-Mode Pioneer — Intelligent Unmanned Operation Platform for Marine, Land, and Air Environments," designing an intelligent unmanned platform capable of operating across multiple environments (sea, land, and air).
- Participated in a research initiative on ESG rating discrepancies and institutional investor ownership strategies, contributing to a successful implementation plan.
- Contributed to academic writing tasks related to artificial intelligence as part of a research team working on scholarly publications.
- Served as a core member of Lanzhou University's Lan Tian Model Aircraft Team.
- Participated in the project "Venus Habitability Transformation Plan," proposing strategies for Venus atmospheric modification and construction of a habitable environment.
